GUN CARE

BoreBlitz

Brushless barrel cleaner for maximum cleaning effect and care

- practical, compact and simple in use
- unique wet/dry cleaning tool on the market
- simultaneous cleaning and drying in the shooting direction through special fabric with integrated sponges and rubber balls (no point of impact shift due to excess oil!)
- reliably neutralizes powder traces in one go
- particularly gentle on the bore through brushless cleaning process (no risk of brush damage)
- no disassembly of the gun necessary – able to be used immediately on the shooting range or on the hunt
- can be used with all known barrel cleaning agents and gun care agents
- available for rifles, shotguns and handguns in calibers .17 - .50 / 4.5 - 12.7 mm and up to 12-Gauge (optical separation through color coding and laser engraving in the brass weight)
- Developed and tested in cooperation with hunters, sport shooters and gun experts around the world
- Available as a set with cleaning cord, universal CLP*-care agent (15ml), handle and storage bag

* Cleaning, lubrication and preservation

Available in
specialist retail shops

Barrel cleaner

for maximum cleaning effect and care

Application of CLP* care agent in the sponge reservoir

Two integrated special sponges in the front and rear parts of the BoreBlitz cleaning cord serve as a **fluid reservoir**. Thereby, for every cleaning process, up to **two different cleaning or care agents** can be used simultaneously (such as aggressive cleaner in the front and neutralizing gun oil in the rear).

Alternatively, the reservoir can be filled with only one liquid, such as the **CLP* care agent** contained in the set, which maximizes the **cleaning and care effect**.

* Cleaning, lubrication and preservation

The **tear-resistant pull string** of BoreBlitz is led through the barrel in the shooting direction with the assistance of the **brass weight**, and is wrapped around the **stable plastic handle**.

A **laser engraving** in the brass end piece shows the used **caliber**, and also serves the purpose of color coding the fabric for **better identification**.

Through a **perfectly fine-tuned ratio** between the length of the fabric body and the pull string, BoreBlitz is also well-suited for **weapons with especially long barrels**.

Caliber-optimized rubber balls provide for an **even pressure and fluid distribution** in the barrel, such that residues are removed gently and thoroughly.

At the same time, the pressure of the balls results in a **drying of the barrel**, which makes the gun **ready for use immediately after the cleaning process**. Thus, the familiar "oil-shot" is a thing of the past!

The fabric, sponges and rubber balls of the BoreBlitz system are **resistant to all familiar barrel agents and gun care agents**.

In the practical, **reclosable plastic bag**, BoreBlitz is protected from the adhesion of dirt, such as that during transport in the gun case.

In addition, the environment is shielded from any **residues of cleaning fluids**.

The compact bag can also be easily used for a **permanent storage** of the cleaning cord during any "shot-free" times.

For traveling a **high-quality fabric bag** made of **oil-resistant material** with snap fastener is also available.*

* Not available for shotgun calibers
